

# Carbon Emissions

(CO<sub>2</sub>e)

**At 2CT Consultants, we take our environmental responsibilities seriously.**

In 2024, we recorded an average carbon footprint of **9.8 tonnes of CO<sub>2</sub>e (carbon dioxide equivalent)**. This figure is calculated by including but not limited to recording our electricity and water consumption, company transport, and employee commutes—providing us with a clear picture of our overall environmental impact.

We're actively working to reduce our carbon footprint through several initiatives, including:

- **Expanding recycling efforts** with larger and more accessible recycling bins and reducing waste where possible
- **Transitioning to electric vehicles** within our company fleet and promote renewable energy
- **Engaging our stakeholders** by involving our employees, suppliers and customers in carbon reduction efforts through awareness, education and collaboration
- **Measuring and recording** our carbon footprint to measure our greenhouse gas emissions to enable us to meet our carbon reduction goals.

We're proud members of the **Supply Chain Sustainability School**, and as part of our long-term strategy, we will continue to measure our carbon footprint annually.

This is a key step in ensuring we remain on course to achieve **Net Zero emissions by 2045**.

**Together, we're building a more sustainable future—one step at a time!**
